

Root Cause Analysis Training

RCA TRAINING GOALS

- Define an improved event review process with a unique approach that expands upon traditional root cause analysis.
- Identify how to form a multidisciplinary team to collect data and evaluate current state.
- Apply evidence-based tools and techniques to address vulnerabilities with sustainable actions to prevent future harm.

NCPS uses a Root Cause Analysis and Action curriculum when providing this training to healthcare teams.

This approach emphasizes action that will be taken upon completion of the in-depth event review, to mitigate the risk of event recurrence

For more information about conducting Root Cause Analysis training for your organization, contact Emily Barr, NCPS Executive Director
